WORLD ENVIRONMENT DAY 2024

The World Environment Day celebrated on 5th June every year serves as a global reminder of our responsibility to protect this beautiful planet by focusing on challenges like climate change, pollution, deforestation, biodiversity loss, etc.

Observance of the Day highlights the need to change toward a sustainable future, urging individuals and businesses alike to take proactive steps to tackle the environment issues.

This year's World Environment Day campaign focuses on land restoration, desertification and drought resilience under the slogan **"Our land. Our future. We are #Generation Restoration."**

In the global platform, India has walked the talk by duly highlighting the significance of "protecting the environment" during its G20 presidency.

As exhorted by our nation, the world today needs to adopt a two-pronged strategy: first, nature and climate-friendly innovation, and second, environmentally-friendly lifestyles.

India has also suggested that the world adopt the concept of green GDP which would be incorporated into the overall Gross Domestic Product.

World Environment Day also delineates the urgent need to collectively minimize carbon footprint. India is already committed to achieving a net zero emissions target by 2070.

As the world transitions to cleaner energy sources to mitigate climate change, the demand of Copper will increase significantly as a vital component in electric vehicles and renewable energy technologies, such as solar panels, wind turbines, etc.

Hindustan Copper Limited, entrusted with the onus of efficient utilization of the country's Copper resources in a sustainable manner, joins the nation in its pursuit to heal the world and leave behind a beautiful world for our children.
